# VISIONRIS®

Improve the management of your department or radiology practice

Developed by physicians for physicians and validated in several sites, VisionRIS® solutions enables radiology facilities to simplify the workflow, to boost productivity and to increase both patient and nursing staff satisfaction.

From scheduling appointments to billing, VisionRIS® improves all your workflow through the admission of patients, work list, dictating the reports and their distribution and finally billing a patient according to his/her account and collection. The possibility of managing multi-site institutions allows VisionRIS® to meet the needs of the most demanding facilities.

Patient registration with and without appointment

For radiologists :

The "Radiologist" interface is configurable to meet the needs of the radiologist with several options: Organization of files per room, prioritization of urgent reports, access to images from PACS and digital dictation. All these options make faster the diagnoses and reports establishments.

For technologists :

With the DICOM Modality Worklist, introducing "patient" data on modality's screen becomes useless. The only input of the patient and the examination data will be at the reception. VisionRIS improve also the tracking of the examinations and consumer products.

For secretaries :

The secretaries will spend less time on writing reports: Once the report is dictated by the radiologist, it is automatically sent by network to the secretary who, helped by digital pedals, can write it in record time.

For receptionists :

VisionRIS has a multi-site agenda for appointments that allows a global view on the occupancy of the examination rooms. With this agenda, making an appointment becomes faster and easier. VisionRIS also offers suggestions for automatic appointments.

Features :

Web portal: Referring physician can request appointments and view medical reports

Registering patients (with or without an appointment)

Easy user interface for scheduling appointments (agenda)

DICOM Modality WorkList and DICOM MPPS

Tracking and billing

Inventory management and tracking products

Advanced reporting: Digital dictation and typing by network, costuming of normal reports

Prioritization of emergency reports

Patient History

Agreements and special pricing

Automatic generation of documents (invoices, reports, lists ...)

Management CNAM

Doctors' fees

Statistics and performance analysis

Performance monitoring, tracking and statistics

Optimized workflow for dictation and reporting
